Features	Hyperplastic polyps (HPs)	Sessile serrated lesions (SSLs)	Traditional serrated adenomas (TSAs)
<b>Clinical characteristics</b>	<ul style="list-style-type: none"> <li>Prevalence: 20%–30%</li> <li>Size: Usually small or diminutive (x 5mm)</li> <li>Morphology: Flat or sessile</li> </ul>	<ul style="list-style-type: none"> <li>Prevalence: 5%–15%</li> <li>Size: Usually larger than HPs, mean diameter 5–7mm</li> <li>Morphology: Flat (45%) or sessile</li> </ul>	<ul style="list-style-type: none"> <li>Prevalence: &lt;1%</li> <li>Size: Usually larger than SSLs</li> <li>Morphology: Polypoid or pedunculated</li> </ul>
<b>Location</b>	70%–80% distal	75%–90% proximal	Mostly distal
<b>Endoscopic appearance</b>	<p>White light:</p> <ul style="list-style-type: none"> <li>Pale or same color as surrounding mucosa</li> <li>Round or oval shape</li> <li>Flatten with insufflation</li> <li>Absent or fine, lacy vessels</li> </ul> <p>Narrow band imaging:</p> <ul style="list-style-type: none"> <li>NICE type 1</li> <li>Uniform dark or white spots</li> </ul>	<p>White light:</p> <ul style="list-style-type: none"> <li>Mucus cap</li> <li>Ring of debris</li> <li>Cloud-like surface</li> <li>Irregular shape</li> </ul> <p>Narrow band imaging:</p> <ul style="list-style-type: none"> <li>NICE type 1</li> <li>WASP criteria</li> <li>Dark spots in crypts</li> </ul>	<p>White light:</p> <ul style="list-style-type: none"> <li>Erythematous</li> <li>Multilobulated</li> <li>"Pine cone" appearance</li> <li>Type IV-S pit pattern</li> </ul> <p>Narrow band imaging characteristics not well defined</p>
<b>Histopathology</b>	<p>Microvesicular HP (MVHP):</p> <ul style="list-style-type: none"> <li>Narrow, uniform basal crypt</li> <li>Serrated upper crypt</li> <li>Eosinophilic mucin droplets in cytoplasm</li> </ul> <p>Goblet cell rich HP (GCHP):</p> <ul style="list-style-type: none"> <li>Goblet cells predominate epithelium</li> <li>Less serrated than MVHP</li> </ul>	<ul style="list-style-type: none"> <li>Serration extending to base of crypts</li> <li>Dilated and inverted "T" or boot shaped crypts</li> <li>Crypt branching</li> </ul>	<ul style="list-style-type: none"> <li>Pseudostratification</li> <li>Villous pattern with stretched or pencilate nuclei</li> <li>Eosinophilic predominant</li> <li>Ectopic crypts</li> </ul>

**Figure 1.** Classification of serrated polyps. (A) Clinical, endoscopic, and histologic characteristics of the different serrated polyps. (B) Development of definitions for SSLs and HPs over time and subsequent changes in prevalence of diagnostic categories. Studies of expert pathology review of HPs using each definition are shown in pie charts. The percentage of HPs re-diagnosed as SSLs is shown in blue, the unchanged cases are red. GCHP, goblet cell-rich hyperplastic polyp; WASP, workgroup serrated polyps and polyposis.

### COMPLICATIONS OF ULCERATIVE COLITIS (UC)

- Primary sclerosing cholangitis (PSC)
- Toxic megacolon
- Vitamin & mineral deficiencies
- Malnutrition & slow growth in children
- Osteoporosis
- Bowel cancer
- Eye manifestations
- Joint pain, arthritis & fibromyalgia
- Anxiety & depression
- Kidney disorders

1994;49:1873-9.26. Previously, one dose of vaccine was recommended for children 12 months to 12 years of age. Single-antigen and combination MMRV vaccines may be administered simultaneously with other vaccines recommended for children 12 to 15 months of age and those four to six years of age. You might have an ultrasound or x-rays to see if there is a problem with your uterus. Accessed September 25, 2007, at: . Knowler WC, Barrett-Connor E, Fowler SE, Hamman RF, Lachin JM, Walker EA, et al., for the Diabetes Prevention Program Research Group. Community Dent Oral Epidemiol. Br Med J. Determining the precise religious background with careful questioning is paramount. The rate in children without immunity is estimated at about 14 percent. Because of the risk for transmission of VZV in schools, all children entering school should receive two doses of varicella-containing vaccine or have other evidence of immunity. Thirly RC, Sobrino MA, Randall JB. The course of SLE is highly variable and may be characterized by exacerbations. The clergy member might convince the patient that accepting the needed evaluation and treatment would not compromise her religion. Influximab for induction and maintenance therapy for ulcerative colitis [Published correction appears in N Engl J Med 2006;354:2200]. Somatoform and related disorders: delivery of diagnosis as first step. Belej-Rak T, Okun N, Windrim R, Ross S, Hannah ME. Chronic intestinal disorders. There was no question of her legal competency, and, through the interpreter, careful efforts were made to help her understand the importance of a complete diagnosis and proper treatment. Get Permissions MOST RECENT ISSUE Jan 2022 Access the latest issue of American Family Physician Read the Issue Don't miss a single issue. Female genital anomalies affecting reproduction. These include health care professionals; household contacts of immunocompromised persons; those who live or work in environments in which transmission of VZV is likely (e.g., teachers, child care workers, residents and staff in institutional settings) or has been reported (e.g., college students, inmates and staff members of correctional institutions, military personnel); nonpregnant women of childbearing age; adolescents and adults who live in households with children; and international travelers. A second dose is recommended for children, adolescents, and adults who previously received one dose. Family physicians play a pivotal role in all aspects of family health and disease prevention, particularly for children who do not receive regular dental care. The RCTs reported no serious adverse effects. The trials were too small and not long enough to comment on the prevention of the progression of existing manifestations or occurrence of major organ complications. TRADE-OFF BETWEEN BENEFITS AND HARMS Corticosteroids There is a consensus based on clinical experience that topical, intralesional, or systemic corticosteroids are effective in the management of cutaneous manifestations of SLE. Although we found no RCT evidence of existing general symptoms, their benefit has been proven in lupus nephritis. Learn about these screening tests. Speckens AE, van Hemert AM, Spinhouw P, Hawton KE, Bolk JH, Rooijmans HG. 2006;75:282-9.25. Am J Gastroenterol. Lin PC, Bhatnagar KP, Nettleton GS, Nakajima ST. Br J Gen Pract. Phillips KA, Siniscalchi JM, McElroy SL. 1995;74:109-17.10. Ulcerative colitis: diagnosis and management. Am J Obstet Gynecol. Stillbirth evaluation: what tests are needed?. For regularly updated information on a variety of health topics, please visit familydoctor.org, the AAFP patient education website. Psychiatric consultation in somatization disorder. Because the risk for transmission can be high among students in schools, colleges, and other educational institutions, students without evidence of immunity should routinely receive two doses of vaccine. Special consideration for vaccination should be given to persons without evidence of immunity who have an increased risk of transmission to persons at high risk for severe disease or who have an increased risk for exposure. However, less severe disease may be diagnosed in adulthood in patients with chronic constipation and failure to thrive. It typically presents between six and 12 months of age as profound anemia, massive hepatosplenomegaly, growth delay, jaundice, and bone deformities. Metabolism. Empson M, Lassere M, Craig J, Scott J. 2000;14:273-9.12. Another RCT found that hydroxychloroquine reduced flare-ups (defined as arthritis, pleuritis, pericarditis, and cutaneous symptoms) compared with placebo in persons with mild SLE. TTY users should call 1 (877) 486-2048. Pediatrics. Goldberg RJ, Novack DH, Gask L. Other visit components may be completed by nursing staff, a nutritionist, or a social worker. A number of state Medicaid programs, including California's, reimburse for fluoride varnish applications by medical staff. Carter MJ, Lobo AJ, Travis SP, for the IBD Section, British Society of Gastroenterology. However, primary prevention remains the best option. Beta-thalassemia major is the most serious type of thalassemia. All states should require that students at all grade levels (including college) and those in child care centers receive varicella vaccine unless they have evidence of immunity. CHILDREN 12 MONTHS TO 12 YEARS OF AGE All healthy children should receive their first dose of varicella-containing vaccine at 12 to 15 months of age, and a second dose between the ages of four and six years (i.e., before entering prekindergarten, kindergarten, or first grade). We serve an ethnically diverse urban community at a county teaching hospital. Diagnostic precision of anti-Saccharomyces cerevisiae antibodies and perinuclear antineutrophil cytoplasmic antibodies in inflammatory bowel disease. Cortisone in ulcerative colitis: final report on a therapeutic trial. 1994;22:1-5.3. Marinho VC, Higgins JP, Logan S, Sheiham A. 2004;184:470-6.4. Righter EL, Sansone RA. It is normal to have strong emotions afterward. 3rd ed. You can also take acetaminophen (one brand: Tylenol) to help you feel better. Losing a pregnancy can be very upsetting for you and your family. Orlando, Fla.: Academic Press, 1986:23-40.13. 2001;48:526-35.34. In this scenario, the patient limited the efforts to help her because of religious beliefs, and attempts at persuasion were not successful. Lead also inhibits the enzyme ferrochelatase, which leads to increased zinc protoporphyrin levels in the blood. The Centers for Disease Control and Prevention defines lead toxicity as a blood lead level of 10 mcg per dL (0.48 µmol per L) or more. 2 A normal blood lead level is 0. Although most children with elevated blood lead levels are asymptomatic at the time of screening, marked neurocognitive defects have been demonstrated even in children with levels of less than 10 mcg per dL. 3 Effects of lead poisoning include irritability, behavior changes, altered sleep, nephropathy, colic, constipation, delayed bone development, and gingival lead lines. One study showed that immigrant Muslim women have low rates of health care use, especially in screening procedures such as those for cervical cancer. 4 The authors of the study concluded that religious and cultural beliefs, such as highly valued modesty, contribute to a reluctance to seek medical care. There may be genetic problems like Down syndrome. Das KM. 1995;31:1:328-32.20. A good support bra can help you feel more comfortable. Diagnostic and Statistical Manual of Mental Disorders. 2004;291:1464-70.22. Centers for Disease Control and Prevention. French FE, Bierman JM, Reese GE, Constantinides VA, Simillis C, Darzi AW, Orchard TR, Fazio VW, et al. 1996;8:449-53.3. Committee on Obstetric Practice, American College of Obstetricians and Gynecologists ACOG Committee opinion, number 167, December 1995. Severe toxicity (i.e., blood lead levels of more than 70 mcg per dL) may cause encephalopathy, paralysis, seizures, or death. 4 Radiography may show abdominal lead flecks (Figure 1) and "lead lines" at the end of growing long bones (Figure 2).5 The peripheral blood smear may show basophilic stippling (as described in our patient). Treatment of lead poisoning includes environmental avoidance, appropriate nutrition, chelation therapy (depending on blood lead level), and supportive care. Cervical cerclage for prevention of preterm delivery: meta-analysis of randomized trials [Published correction appears in Obstet Gynecol 2004;103:201]. Clinics can bill using current procedural terminology (CPT) code D01203 (Topical application of Fluoride [Prophylaxis not included]) and International Classification of Diseases, 9th rev. The recommended minimum interval between the first and second doses is three months for children 12 years or younger and four weeks for persons 13 years or older. Diabetes Care. New York, N.Y.: Oxford University Press, 1989:235-76.12. Risk of ulcerative colitis among former and current cigarette smokers. Fitzgerald JM, Marsh TD. Through this interpreter, the medical staff obtained a history of urinary bladder problems that have persisted for at least three months. Ben-Rafael Z, Seidman DS, Recabi K, Bider D, Mashiah S. Ulcerative colitis in Olmstead County, Minnesota, 1940-1993: incidence, prevalence, and survival. Women should be counseled to avoid conception for one month after each dose, but they may continue to breastfeed. Health care institutions should ensure that all health care professionals have evidence of immunity to varicella. 1999;44:1-13.14. 1999;59:3113-20.5. Barsky AJ, Orav EJ, Bates DW. Psychosom Med. Single-antigen varicella vaccine should be used for persons with some degree of immunodeficiency. A two-dose varicella vaccination policy is recommended for outbreak control. This can last for several weeks. Extraintestinal manifestations and complications in inflammatory bowel diseases. 2001;39:705-15.8. Chaturvedi SK, Desai G, Shaligram D. 2005;140:300-10.20. The trials were too small and not long enough to comment on the prevention of the progression of existing manifestations, or the occurrence of major organ complications. (ICD-9) code V07.31 (Need for prophylactic fluoride administration) under principal
